

Your Reliable Partner For Commercial Cooling

Retail Chains & Food Industry

Heiko Sittinger
(Key Account Manager Retail)

„We offer **future-proof system concepts** – all are state of the art. You’ll receive **comprehensive support** from concept creation up to the technically perfected system. Everything of course, with extensive documentation, training and ordering assistance – both for you as the operator as well as for you as the contractor or installer.

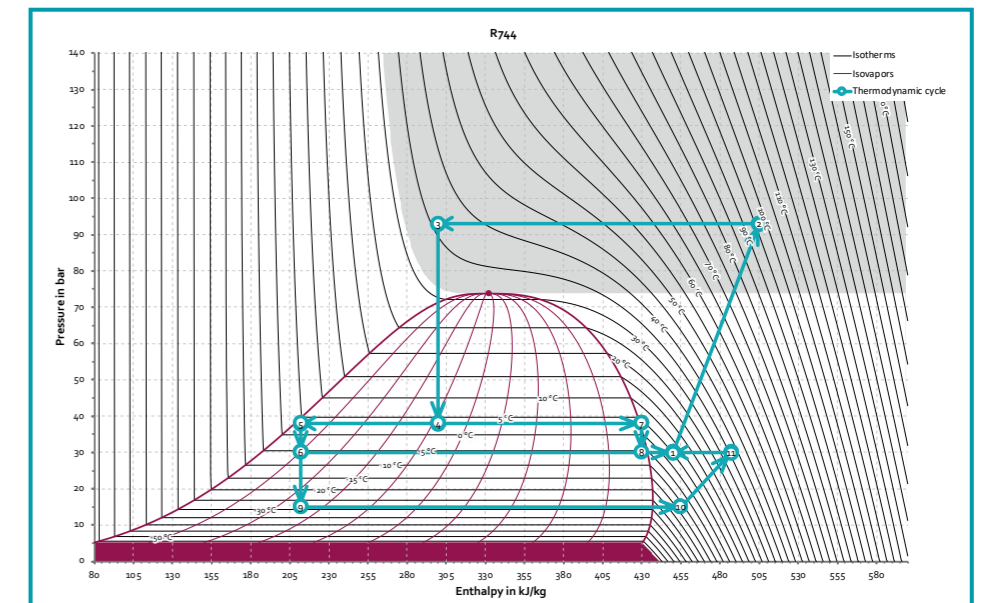

★ **Since 1982** we’re providing **optimised cooling systems**, expertly combined out of specially selected components, TEKO multi-compressor units and Wurm Systems control, which have been used by retail chains in Europe for over 30 years.”

Refrigeration systems

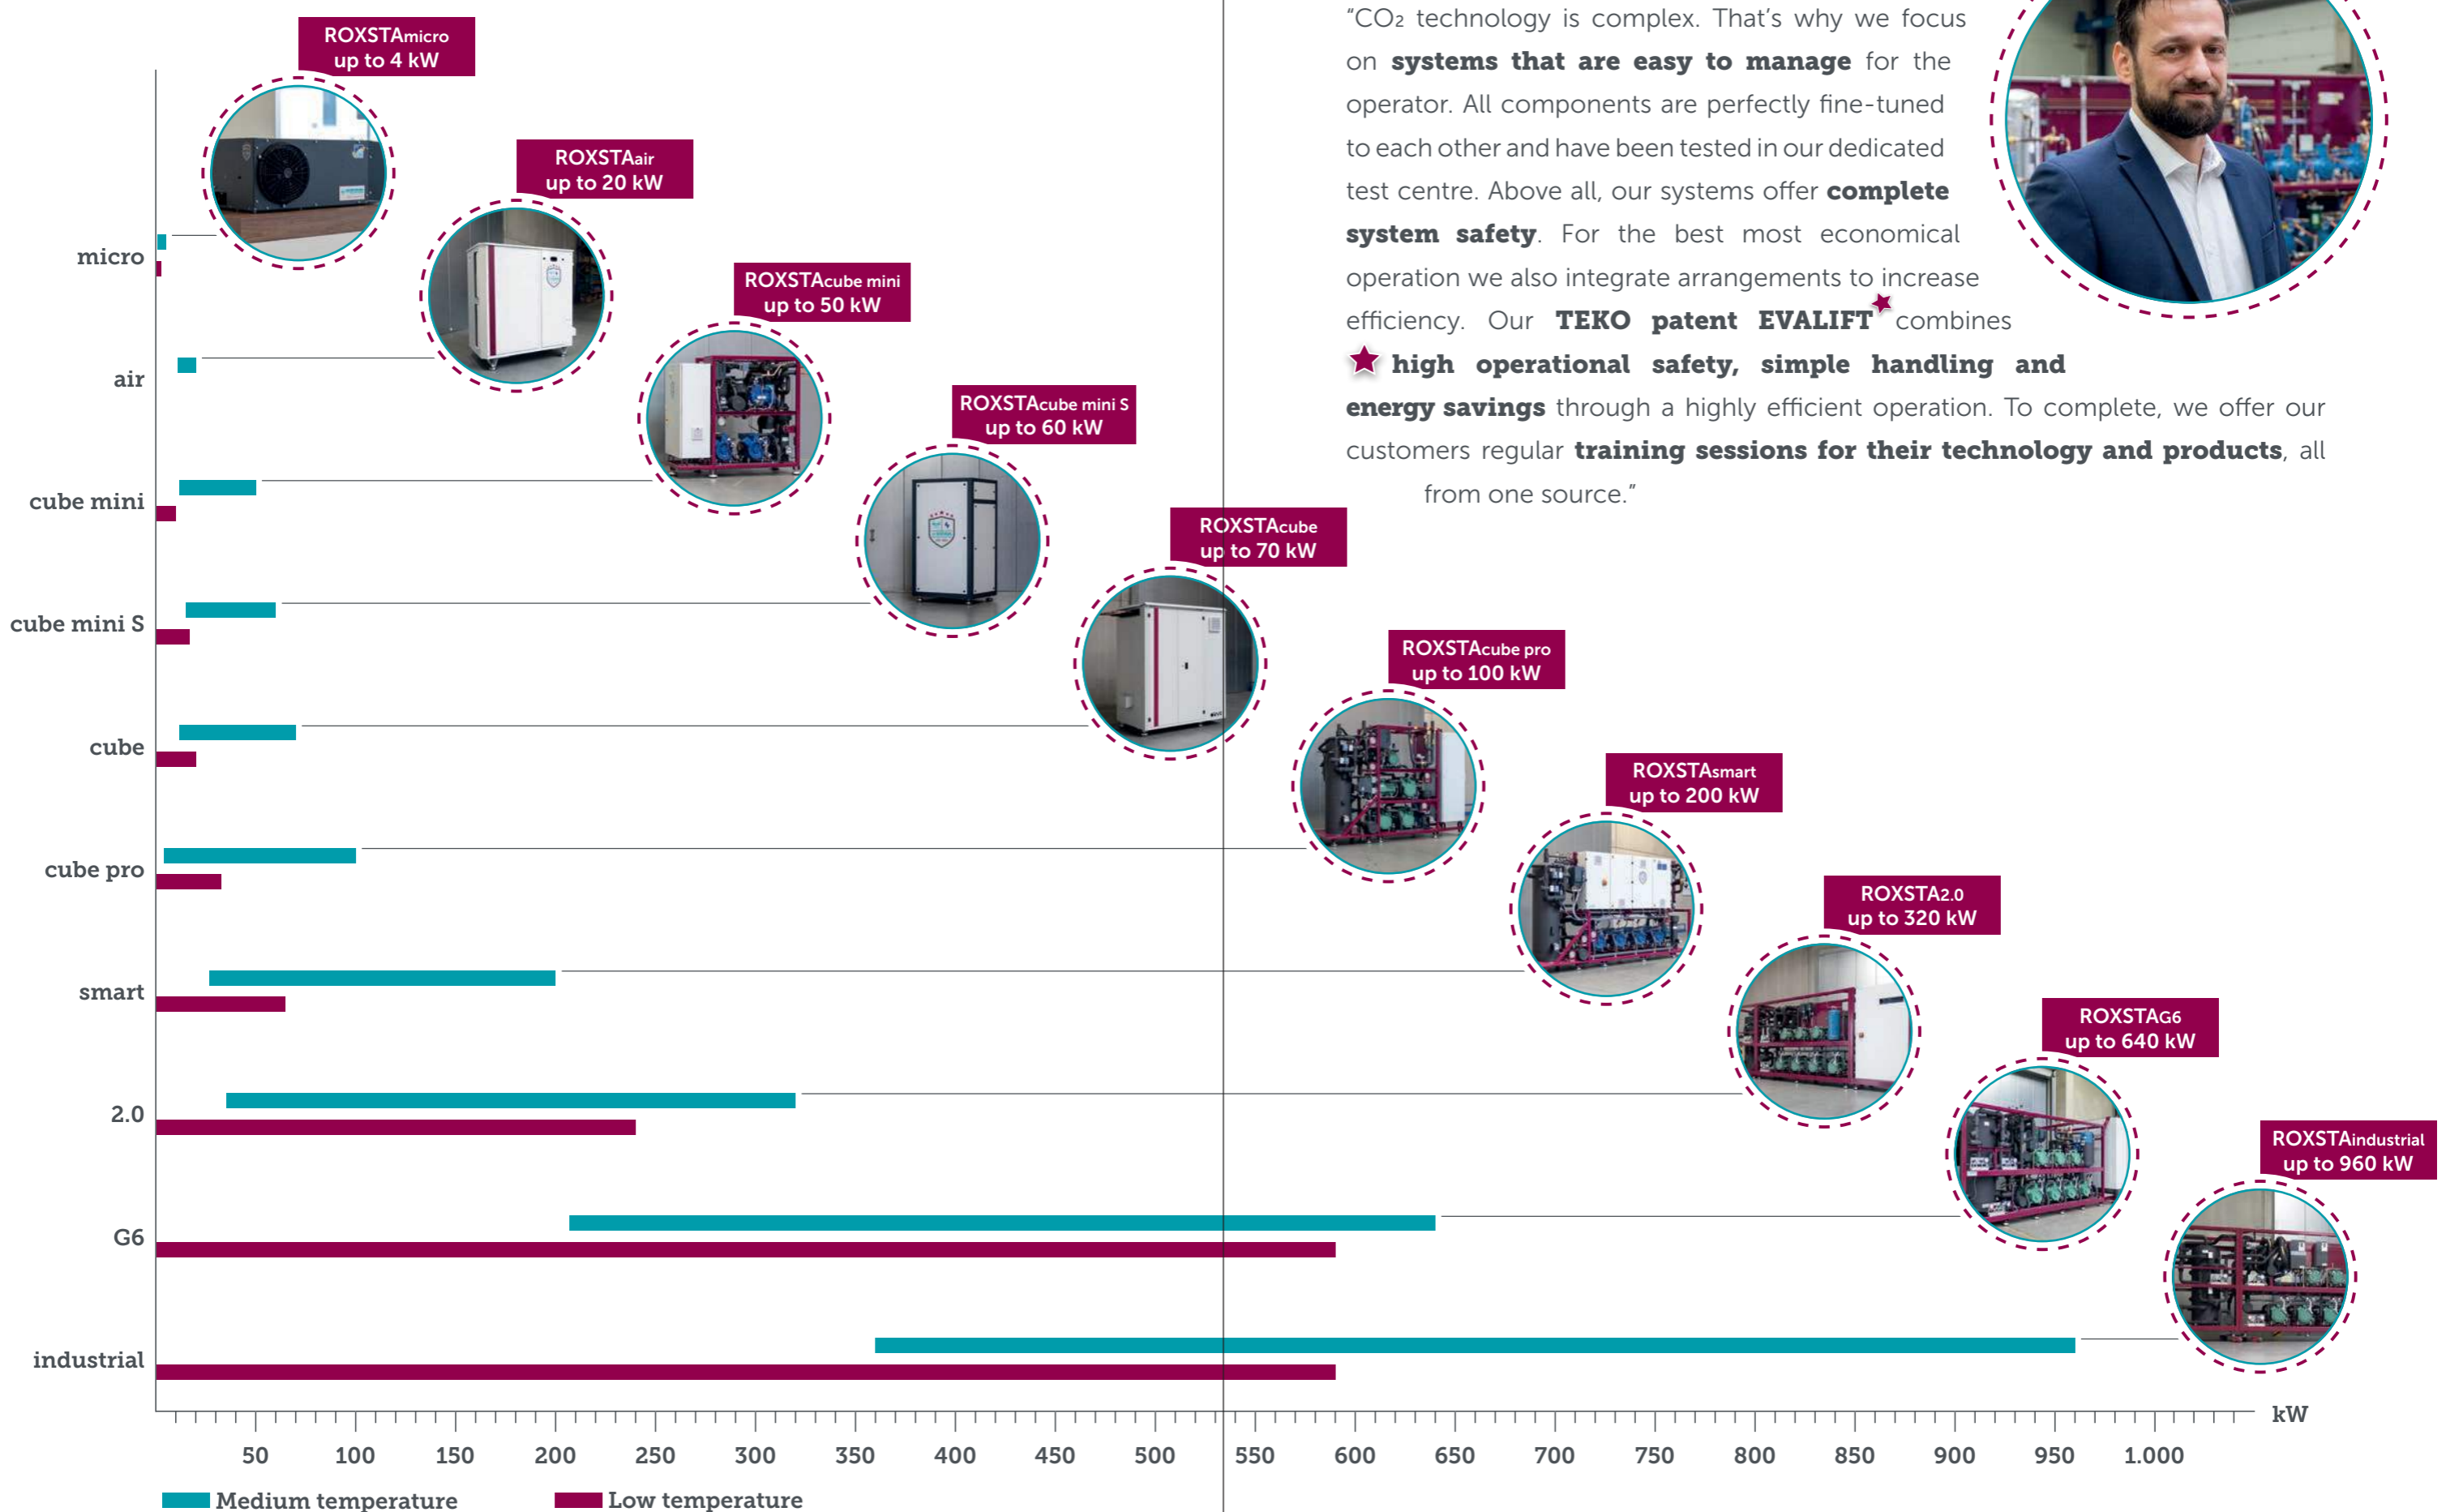

★ On the safe side

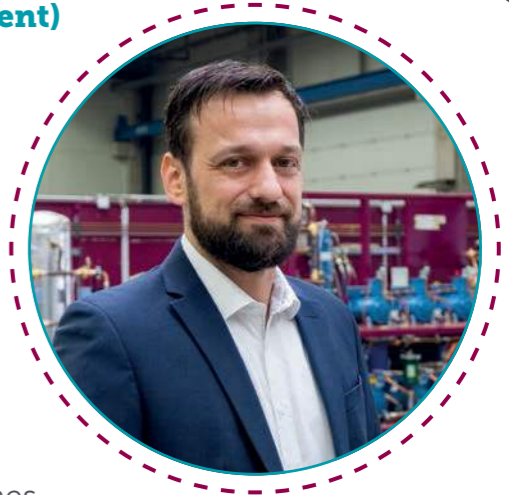

We always consider **the whole cooling system**, not just the individual component. Each gas cooler is designed under **realistic operating conditions** and **with a low pressure drop**. The result: high reliability, no loss in performance and efficient operation.

CO₂ Solutions

René Rauch (Head of Product Management)

“CO₂ technology is complex. That’s why we focus on **systems that are easy to manage** for the operator. All components are perfectly fine-tuned to each other and have been tested in our dedicated test centre. Above all, our systems offer **complete system safety**. For the best most economical operation we also integrate arrangements to increase efficiency. Our **TEKO patent EVALIFT** combines **high operational safety, simple handling and energy savings** through a highly efficient operation. To complete, we offer our customers regular **training sessions for their technology and products**, all from one source.”

High Quality Manufacturing

Alexander Wirsching (Technical Manager)

„In close partnership with our customers, we develop systems that meet the high demand for **reliability and a long life-time**.

Hermetically sealed systems, uninterrupted running time of over 15 years, permanent quality control and low service and maintenance costs – all this creates the base for our high-quality products. That's why, for example, we manufacture all our pipelines in the factory under nitrogen.“

★ Bionic Design

- Reduces vibrations & pulsations – optimised pipe lengths
- Minimal connection points through bent & extruded pipes – less refrigerant loss
- Compact design – small footprint

★ Fully Leak-Proof Systems

- Bent copper & stainless steel pipes instead of hose connections
- Loss-free piping
- Pressure and leak testing of every system up to 180 bar
- Leakage test < 1g refrigerant per year

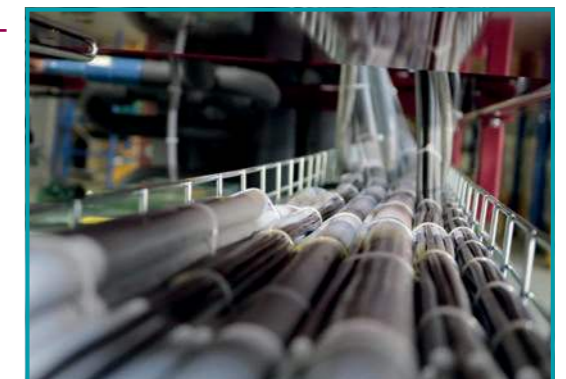

★ Long Durability

- Corrosion protection through high quality components
- Powder coated frame
- Receiver with saltwater resistant coating & aluminium-clad grease tape
- No steel piping in the system

★ Clean Cable Routing

- Clear and comprehensive connection of all electronic components
- Every system is electrically tested before delivery
